

# Committed to a Comprehensive Investigation And Cleanup of the Nutley Site

## Update on the Roche Nutley Environmental Remediation – 11-23-14 to 5-23-15

Roche is working closely with the New Jersey Department of Environmental Protection (NJDEP) to clean up the site. Roche and its experts are utilizing the best technologies to clean up the site quickly and safely so it can be returned to productive use, and a number of approved cleanup activities are underway throughout the site.

Over the past six months, Roche has:

- Initiated soil remediation throughout the site and completed soil remediation in two investigative areas (IAs)\* on the site (IA-12 and IA-13).
- Submitted a *Feasibility Study* (FS) to NJDEP for remediating soil in one area (IA-10 North), and hosted a public meeting on the proposed remedies.
- Completed initial steps for remediation of the riparian areas in the southeast section of the site (IA-14 and IA-15) and groundwater in five areas (IA-1, IA-4, IA-6, IA-11 and IA-15).
- Installed additional wells for groundwater investigation/remediation.
- Completed two rounds of groundwater sampling and monitoring, and continued to evaluate potential impacts of groundwater contamination.
- Completed interim remedial measures (IRMs) for groundwater and began post-remediation monitoring in two areas (former Buildings 70 and 104 on IA-10); initiated groundwater IRMs in two areas (IA-2 and IA-12); and completed groundwater IRM pilot tests in three areas (IA-7, IA-11 and IA-12).
- Submitted a Site-wide Groundwater Progress Report to NJDEP.
- Responded to questions from residents and made information and reports available on the website ([www.roche-nutley.com](http://www.roche-nutley.com)), at the local libraries and through direct mailings.

Over the next six months, Roche plans to:

- Complete soil remediation throughout the site and submit appropriate documentation to NJDEP.
- Install additional wells, as necessary, to further assess/refine remediation plans, and continue required groundwater monitoring.
- Continue groundwater IRMs in progress and conduct groundwater monitoring to confirm effectiveness of these IRMs.
- Initiate additional groundwater IRMs in seven areas.
- Continue to make information and reports available on the website ([www.roche-nutley.com](http://www.roche-nutley.com)), at the local libraries, and through direct mailings, as necessary.

More detailed information on the investigation and cleanup can be found on the Roche website at [www.roche-nutley.com](http://www.roche-nutley.com). If you have questions regarding the ongoing activities, please contact either the Roche or TRC representatives listed below.

\*To more effectively conduct the environmental investigation, the Nutley site was divided into 15 Investigative Areas (IAs). In some cases, cleanup of former buildings in an area are handled in separate Remediation Action Work Plans (RAWPS). A map of the IAs and all RAWPS submitted to the NJDEP are available on the Roche-Nutley website: [www.roche-nutley.com](http://www.roche-nutley.com).
